

Explanations of the differentiation code:

Coding has not yet been implemented in all product categories. This will be done successively over the next few years.

The introduction of a differentiation code is only made where it adds value.

The code can consist of up to 3 parameters.

Each parameter has specified values for the corresponding parameters depending on the product category.

If the code starts with a number, it is always the height in cm.

If the number is in the 2nd position in the code, it always stands for the width in cm.

Numbers in the 3rd position in the code stand for the number of cooking zones on hobs.
